STRATEGY OBJECTIVE Deliver equity-like returns with a materially shallower drawdown profile by rotating across four uncorrelated breadth/momentum sleeves: US sector breadth (Strategy A), broad asset-class momentum (B), thematic momentum (C), and Europe sector breadth (D). A CSP1-breadth regime gate halves equity exposure into SHY Treasury when the broad US market is structurally weak. A Phase 22 EEM/SPY relative-strength tilt allocates 10% from B to EEM during EM-favoured cycles.

DISCLOSURE This factsheet is a research artefact published by Navigo Investment Management Pte. Ltd. for Accredited Investor diligence. It is NOT an offer to subscribe to any fund product and does not constitute investment advice. Returns shown are backtest results — past simulated performance is not indicative of future returns. Walk-forward parameter selection (annual refit on prior-period data only); transaction costs of 2-5 bps per unit weight change applied per sleeve; no leverage; signals lagged one trading day. Live track record will be reported separately once the strategy is deployed in a regulated vehicle.
